## Work Flow in PHP using Classes

```
<?php
class Car {
    // Properties
    public $color;
    public $model;

    // Constructor
    public function __construct($color, $model) {
        $this->color = $color;
        $this->model = $model;
    }

    // Method
    public function display() {
        return "This car is a " . $this->color . " " . $this->model . ".";
    }
}
?>
```
